

PROFESSIONAL SUMMARY

Python Full-Stack Developer specializing in backend services and API development using Python (Django, Django REST Framework) and Node.js/Express. Experienced in building scalable applications, designing RESTful APIs, integrating SQL/NoSQL databases (PostgreSQL, MySQL, MongoDB), and connecting third-party APIs (Stripe, Razorpay, AWS S3). Comfortable with debugging, troubleshooting, performance optimization, version control (Git/GitHub), and deployment support on Linux-based servers (Nginx, Gunicorn, AWS EC2).

SKILLS

Programming Languages: Python, JavaScript, TypeScript
Back-End Development: Django, Django REST Framework, Node.js, ORM (Django ORM, SQLAlchemy), RESTful APIs, Clean Architecture, MVC Architecture, MVT Architecture, Express.js
Front-End Development: Next.js, React.js, Redux, Redux Toolkit (RTK), TanStack Query (React Query), Tailwind CSS, Bootstrap, HTML, CSS
Databases: PostgreSQL, MySQL, MongoDB
Integrations: Git, GitHub, Razorpay, JWT, Figma, Nginx, Gunicorn, AWS, Firebase, Vercel, Render, S3 Bucket, Gemini API, Expertise In: Data Structures & Algorithms

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Developer | 2025–Present

- Build and maintain backend services and RESTful APIs using Python (Django/DRF) and Node.js/Express for web applications.

- Integrate SQL/NoSQL databases (PostgreSQL, MySQL, MongoDB) and third-party APIs (Stripe, Razorpay, AWS S3) as required.

- Support deployments on Linux-based environments using Nginx/Gunicorn and cloud platforms (AWS EC2, Render, Vercel); troubleshoot production issues and perform performance optimization.

- Collaborate with stakeholders to gather requirements, document API behavior, and manage source control with Git/GitHub.

Full-Stack Developer Trainee | Brototype, Calicut | 2023–2025

- Developed full-stack projects with Django/DRF, React/Next.js, and Node.js; implemented REST API endpoints and database integration.

- Practiced code quality standards through structured debugging, peer feedback/code reviews, and consistent Git/GitHub workflows.

EDUCATION

Bachelor of Science in Physics (B.Sc. Physics) 2020 - 2023

Calicut University

Science 2018 - 2020

GHSS chullikode, Kuzhimanna

PROJECTS

Vector — E-Learning Platform | Django (Backend API) + Next.js/React | PostgreSQL

- Designed and implemented RESTful APIs in Django/Django REST Framework for course management, role-based access (user/staff/admin), and payment workflows.
- Integrated third-party APIs/services including Stripe for payments and cloud storage (AWS S3/Cloudinary) for media handling.
- Supported deployment and environment configuration with CI/CD pipelines; deployed backend on Render and frontend on Vercel.
- Performed debugging and troubleshooting for API issues and optimized API/database interactions for scalability.

Tech: Python, Django, Django REST Framework, PostgreSQL, REST API development, Stripe, AWS S3/Cloudinary, CI/CD, Vercel, Render, WebRTC

Caremall — E-commerce Platform | Node.js/Express Backend + MongoDB | AWS EC2/S3

- Developed backend RESTful APIs with Node.js/Express for core e-commerce workflows (products, orders, warehouse operations) and integrated NoSQL database (MongoDB).
- Integrated third-party APIs including Razorpay for payments and AWS S3 for asset storage.
- Deployed and supported production releases on AWS EC2 (Linux), using CI/CD pipelines for automated build/deploy; performed troubleshooting during deployment and runtime issues.
- Collaborated across modules (user/admin/warehouse/ERP) to align API contracts and document endpoints.

Tech: REST API development, Node.js, Express.js, MongoDB (NoSQL), Razorpay, AWS EC2, AWS S3, Linux, CI/CD, Git/GitHub

E-Commerce Platform

Linkedin Post GitHub

This is an e-commerce website focused on the sale of fashion products, built to provide users with a smooth and

responsive shopping experience. The platform features a responsive design developed using Bootstrap, ensuring

compatibility across all devices. It includes secure user registration and login with email OTP verification, allowing

users to manage their products, orders, and addresses easily. Products are displayed with detailed views, multiple

images, and categorized listings that include search and sorting

f

options for easy navigation. The backend is powered by Django with PostgreSQL for efficient data handling and

optimized performance. Razorpay is integrated for secure and seamless online payments. The application is deployed

on AWS EC2 and follows the MVT architecture with version control using Git.

Tech Stack

Tech Stack: Python, Django (MVT Architecture), HTML, CSS, Bootstrap, PostgreSQL, Razorpay, AWS EC2, Git

GitHub

QuickBlog — Blog Platform | Python, Django, MySQL | AWS EC2

- Built RESTful APIs in Django for CRUD operations on posts, categories, comments, and likes; implemented authentication using JWT.

- Integrated SQL database (MySQL) and handled database queries via Django ORM.

- Deployed on AWS EC2 (Linux) and configured the application for reliable runtime; performed debugging/troubleshooting of API and deployment issues.

- Maintained code quality through organized project structure, reusable modules, and clear API documentation.

Tech: Python, Django, REST API development, SQL (MySQL), JWT, AWS EC2, Linux, Git/GitHub

QuickStay - Hotel Management System Live Link [GitHub](#)

Designed and developed a fully responsive hotel management system frontend that allows users to browse

rooms, register, log in, and manage bookings. The application features a clean and intuitive user interface

built with modern UI practices to ensure a seamless experience across all devices. User authentication and

session management were securely handled using Clerk, enabling protected routes and personalized

access. The project focused on delivering high performance and fast load times through efficient

development practices using React and Vite, while Tailwind CSS was used to create a visually

appealing and consistent design throughout the application. The system is optimized for performance and

fast load times and is deployed on Vercel for reliable delivery and scalability
